Screen 01: User Home (build/user-home.html)
This is the first page to be shown to the user, either logged in or not. The only difference would be on the navigation bar.

Screen 02: Public Profile (build/profile.html)

This is the page shown when someone clicks on a profile's picture or profile's name.

Screen 03: Private Profile (build/MyProfile.html)

This page allows the user to see and adjust his listening settings, profile settings, profile picture, his uploaded songs, favorites list, and the redemption page. When the user clicks on one of the selections, the section will change correspondingly.

Screen 04: Playlist View (build/playlist-view.html)
This page allows the user to navigate between music they have heard in the past. It also allows
the user to view, like, reply, and comment on the song currently being played. A description of
the song and lyrics provided by the artist are displayed. If no lyrics are present, the description
fills the width. The three songs displayed will be interactible in a carousel type wheel.

Screen 05: Gift Cards (build/redeem.html)

This page allows the user to select what type of gift card and what value of gift card he would like to exchange his beatcoins for. All images are placeholders until we work with corporate partners & create an official logo.
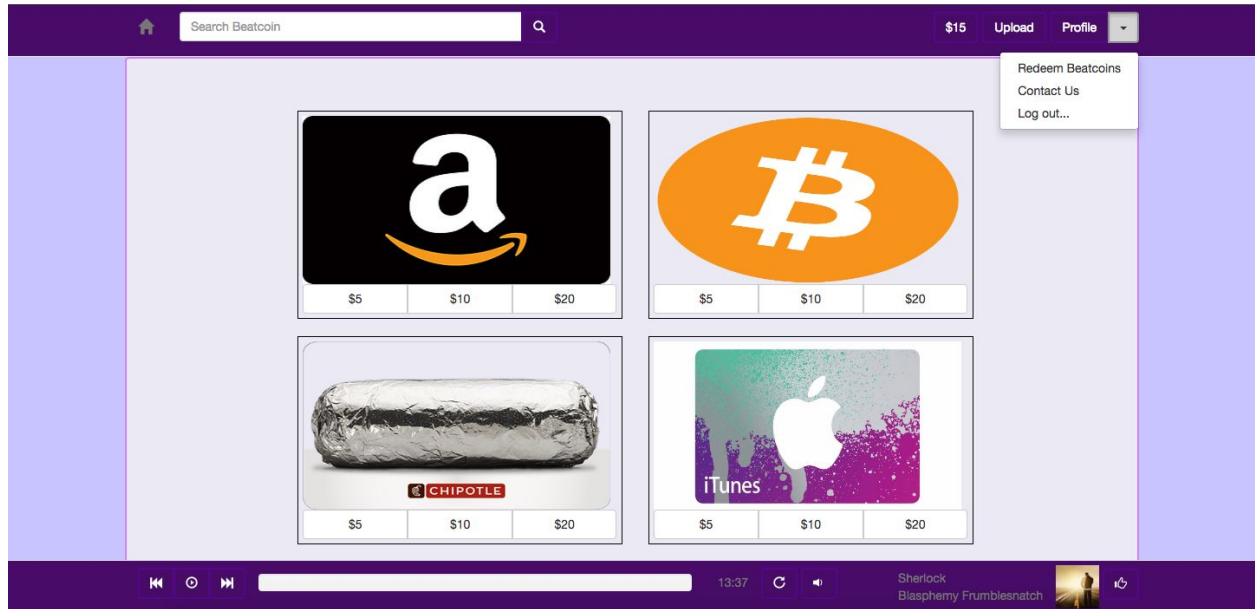

Screen 06: Contact Us (build/contact-us.html)
This page allows anyone to contact us through an email sent with the information filled in. It also provides anyone with information regarding Beatcoin's company phone number and address.

Ryan Whitesides worked on the top nav bar, the bottom play bar, and the redeem beatcoins page.
Yueying Liu worked on the user home page and overall style which is applied to every page.
Winston Ho worked on the private profile page.
Alex Lamson worked on the public profile page.
Kenneth Tsui worked on the contact page and the playlist view. Additionally, provided Git support with making PRs and merging branches.
